

User Class:

```
package miniProject1;

public class Users {
    int id;
    String name;
    String password;

    public Users(int id, String name, String password) {
        this.id = id;
        this.name = name;
        this.password = password;
    }

    public int getId() {
        return id;
    }

    public void setId(int id) {
        this.id = id;
    }

    public String getName() {
        return name;
    }

    public void setName(String name) {
        this.name = name;
    }

    public String getPassword() {
        return password;
    }

    public void setPassword(String password) {
        this.password = password;
    }
}
```

Repository class:

```
package miniProject1;

import java.util.ArrayList;

public class Repository {
    static ArrayList<Users> list=new ArrayList<>();

    public static void addUser(int id,String name,String password){
        list.add(new Users(id,name,password));
        System.out.println("ID - "+id+" name - "+name+" password - "+
password);
    }

    public static String loginUser(String name, String password){

        String username=name;
        String userPassword =password;
        for (Users user: list){
            if
(user.getName().equals(name)&&user.getPassword().equals(password)){
                System.out.println("user successfully login");
                return "user successfully login";
            }
        }
        System.out.println("user not found");
        return "user not found";
    }
}
```

Login class :

```
package miniProject1;
import jakarta.servlet.ServletException;
import jakarta.servlet.annotation.WebServlet;
import jakarta.servlet.http.HttpServlet;
import jakarta.servlet.http.HttpServletRequest;
import jakarta.servlet.http.HttpServletResponse;

import java.io.IOException;
import java.io.PrintWriter;

@WebServlet("/login")
public class Login extends HttpServlet {
    @Override
    protected void doGet(HttpServletRequest req, HttpServletResponse
resp) throws ServletException, IOException {

        resp.setContentType("text/html");
        PrintWriter out=resp.getWriter();

        out.println(
            "<form action=\"login\" method=\"post\">\n" +
            "    <label for=\"name\" >name</label>\n" +
            "    <input type=\"text\" name=\"name\" id=\"name\">\n"
+
            "\n" +
            "    <label for=\"password\" >password</label>\n" +
            "    <input type=\"password\" name=\"password\"
id=\"password\">\n" +
            "\n" +
            "    <button type=\"submit\"> submit</button>\n" +
            "</form>\n"
        );
    }

    @Override
    protected void doPost(HttpServletRequest req, HttpServletResponse
resp) throws ServletException, IOException {
        resp.setContentType("text/html");
        PrintWriter out=resp.getWriter();

        String name=req.getParameter("name");
        String password=req.getParameter("password");

        //        Repository.loginUser(name,password);
        out.println(Repository.loginUser(name,password));
    }
}
```

Register Class :

```
package miniProject1;

import jakarta.servlet.ServletException;
import jakarta.servlet.annotation.WebServlet;
import jakarta.servlet.http.HttpServlet;
import jakarta.servlet.http.HttpServletRequest;
import jakarta.servlet.http.HttpServletResponse;

import java.io.IOException;
import java.io.PrintWriter;

@WebServlet("/register")
public class Register extends HttpServlet {

    @Override
    protected void doGet(HttpServletRequest req, HttpServletResponse
res) throws ServletException, IOException {
        res.setContentType("text/html");
        PrintWriter out=res.getWriter();
        out.println("<form action=\"register\" method=\"post\">\n" +
            "    <label for=\"id\" >id</label>\n" +
            "    <input type=\"text\" name=\"id\" id=\"id\">\n" +
            "\n" +
            "    <label for=\"name\" >name</label>\n" +
            "    <input type=\"text\" name=\"name\" id=\"name\">\n"
+
            "\n" +
            "    <label for=\"password\" >password</label>\n" +
            "    <input type=\"password\" name=\"password\"
id=\"password\">\n" +
            "\n" +
            "    <button type=\"submit\"> submit</button>\n" +
            "</form>\n"
        );
    }

    @Override
    protected void doPost(HttpServletRequest req, HttpServletResponse
resp) throws ServletException, IOException {
        resp.setContentType("text/html");
        PrintWriter out=resp.getWriter();

        int id=Integer.parseInt(req.getParameter("id"));
        String name=req.getParameter("name");
        String password=req.getParameter("password");

        Repository.addUser(id,name,password);
        out.println("name - "+ name+ " password - "+ password );
    }
}
```

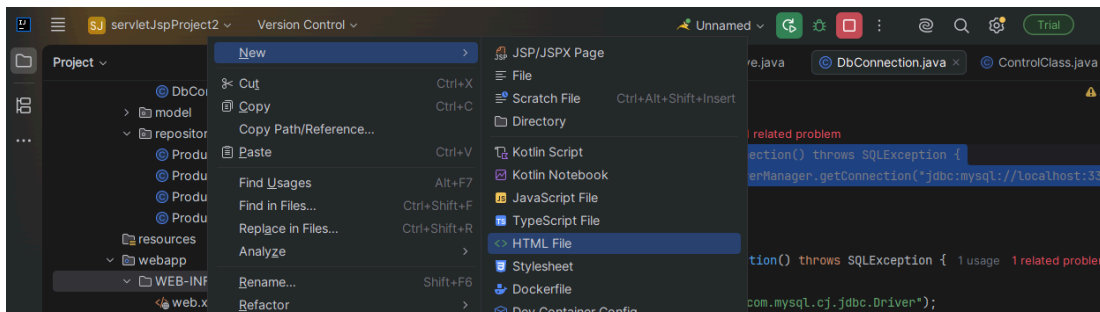

```
}
```

Delete the index.jsp

Create the index.html

- Right click the WEB-INF
- New -> HTML
- Enter index.html

Html code :

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Title</title>
</head>
<body>
<h1>Register</h1>
<a href="register">register</a>
<h1>login</h1>
<a href="login">login</a>

</body>
</html>
```
